'Thank you so much for taking part in the Omaha trial, your ongoing participation is incredibly important in helping us to better understand and try to prevent Type II Diabetes. We really appreciate the time you give to make this possible' Alex Keen, Clinical Trials Practitioner

Update on Omaha:

We have finished recruiting new participants to the study, we are now following up women at their six month visits for their routine blood tests. Next we will be seeing women for their one year visits and saying goodbye to those who have finished on the study. We love to catch up with participants and see how you and your babies are getting on!

Tips for your next visit...

- Please arrive on time and let us know if you wish to rearrange for a more convenient time
- Visits usually take around 2 hours, you may wish to bring something to read (or do our word search below)!
- Don't forget to pick up your £10 thank you voucher!

Since we started the study, the General Data Protection Regulation (GDPR) has come into force. That is why we would like to share some updated information about how we use your data: See here for more information: <https://www.barc-research.org/omaha-data>
