Welcome to the first issue of the OMAHA participant newsletter!

"Thank you very much for taking part in the OMAHA study. Type 2 diabetes continues to be a major public health problem, and I am confident that OMAHA's investigation into the effect of metformin is a small but significant step towards tackling this problem at a key stage in a mother's life."

Prof. Shakila Thangaratinam, Chief Investigator

Recruitment:

Recruitment is now complete! We are very happy to have reached this stage. Our focus will now be on seeing women for their follow-up visits.

Whipps Cross
40 participants
randomised

The Royal London
73 participants
randomised

Newham Hospital
31 participants
randomised

As an OMAHA participant, we ask you to come to the hospital for 3 visits after childbirth:

6-13 weeks – for a fasting blood test (OGTT)

6 months – for a routine blood test (HBA1C)

1 year – for a fasting blood test (OGTT)

For your follow-up visits

- Please remember to bring your paper diary or to show us your Dosecast App when you come for your visit
- We will give you a £10 Love2shop voucher when you attend your visit

We look forward to seeing you!
